It currently consists of 23 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             contig of 38304 bp in length contig of 29349 bp in length gap of unknown length ago to contig of 20716 bp in length contig of 20716 bp in length gap of unknown length length gap of unknown length length of 19463 bp in length contig of 19463 bp in length contig of 10828 bp in length contig of 10828 bp in length gap of unknown length contig of 11589 bp in length contig of 11589 bp in length contig of 12772 bp in length contig of 18513 bp in length gap of unknown length contig of 8513 bp in length contig of 8513 bp in length gap of unknown length gap of unknown length contig of 8513 bp in length gap of unknown length gap of unknown length gap of unknown length gap of unknown length sigap of unknown length contig of 8067 bp in length

COMMENT

```
* NOTE: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of I contiggs. Gaps between the contigs

* are represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CTGCACTGGCGCACCGGTGCCACCTTCTGCAGGGTATTTGGGCTCCTCCTTTTTGCCTCC 369
sequence may extend beyond the ends of the clone and there may be contigs that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

The present sequence is that of nucleic acid encoding a human orphan G-protein coupled receptor, designated hpl5a. The sequence was initially identified in a human placenta genomic library using probes representing transmembrane domains III, V and VI of human serotcoin 5-HYlbbeta receptor. The endogenous ligand for hpl5a is likely to be a

neuromodulator since the receptor is present in several regions of the human brain. The invention provides hpl5a nucleic acids, vectors, host cells, antibodies, probes, antisense oligonucleotides, transgenic non-uman animals, methods of isolating the receptor, methods of treating an abnormality that is associated with activity of hpl5a e.g. cardiovascular or gastrointestinal disorders, and methods of determining binding of compounds to hpl5a

The invention relates to novel nucleic acids and polypeptides useful for diagnosing, treating, preventing and/or prognosing disorders related to these polypeptides. The polynucleotides are especially useful in the diagnosis, prognosis, prevention and/or treatment of diseases which include kidney disorders (e.g. renal failure or nephritis), cardiovascular disorders (e.g. hypertension or myocardial infarction), condiovascular disorders (e.g. hypertension or myocardial infarction), electrolyte imbalance disorders (e.g. hyponatraemia or hyperkalaemia), neoplastic disorders (e.g. nephtoma or renal cell cancer), autoimmune disorders, neural activity and neurological disorders, endocrine disorders, neural activity and neurological disorders, wound healing and respiratory disorders. AAS30165-AAS30251 represent the novel invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at: ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polynucleotides and polypeptides, useful for diagnosing, treating, preventing or prognosing e.g. kidney, cardiovascular, blood, electrolyte imbalance or neoplastic disorders, autoimmune diseases, cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        INGRANGCIAGGITCIGATICCCICTICCICTICCACCCICTGCCICTITAGCCICTAIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               577 TTGAATGCTAGGTTCTGATTCCCTCTTCCACCCTCTGCCTCTTTAGCCTCTATC

```

The present invention relates to the isolation of novel human neoplastic disease associated polypeptides (AAU21568-AAU21851), and CDNA and DNA sequences encoding for these polypeptides. The sequences of the invention according for these polypeptides. The sequences of the invention care useful in the diagnosis, treatment, prevention and/or prognosis of disorders involving neoplastic disease such as hyperproliferative disorders involving neoplastic disease such as hyperproliferative disorders (as leakemia, bone cancer, bladder cancer, brain stem glioma, adult liver cancer, childhood carebellar astrocytoma, or Hodgkin's lymphoma). The sequences of the invention may also be useful for treating other disorders, such as neural disorders, immune system disorders, muscular disorders, cardiovascular disorders and renal disorders, pulmonary disorders, cardiovascular disorders and renal disorders. The polymunelectide sequences of the invention are also useful in gene therapy. AAS35051-AAS3125 represent DNA sequences encoding for the novel human neoplastic disease associated polypeptides of the the printed specification, but was obtained in electronic format directly from MIPO at ftp. wipo.int/pub/published_pct_sequences 61 AIGIGGAACAGCICTGACGCCAACITCTCCTGCTACCATGAGTCTGTGCTGGGCTATCGT 120 Novel polypeptides and polynucleotides useful as diagnostic reagents to diagnose diseases or disorders associated with aberrant expression or activity of polypeptides, and for treating cancers, rheumatoid arthritis. 1 TIGAAIGCIAGGITCTGAITCCCTCTTCCTCTTCCACCCTCTGCCTCTTTAGCCTCTATC Gaps ., Query March 99.6%; Score 1306; DB 4; Length 2046; Best Local Similarity 100.0%; Pred. AAKS4951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
contains and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
contains affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
couplynucleotides may be used to produce the secreted (I), by inserting the
nucleic acids into a host cell and culturing the cell to express the
concers and cancer metastases of haematopoietic-related diseases, especially
cancers and cancer metastases of haematopoietic derived cells. AAK64703
cancers and cancer metastases of haematopoietic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK64550 and AAM82169
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AACCTCACACTGGCTGATCTCCTCTACTGCACGCTCCTTCAGCCCTTCTCTGTGGACACC 300
                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                61 ATGTGGAACAGCTCTGACGCCAACTTCTCCTGCTACCATGAGTCTGTGCTGGCCTATCGT

                                                                                                                                                                                                                                                                                    The present invention provides human cDNAs, proteins and related genomic DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequence is a genomic DNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TATGTTGCAGTTAGCTGGGGGGGTGGTGGTGGTGGTGACAGGCACCGTGGCAATGTGCTC

New isolated nucleic acid encoding a protein for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives

Disclosure; SEQ ID NO 1209; 837pp; English

The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded to pathological conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative of sorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, system disorders e.g. Alzheimer's disease and amylotrophic lateral selerosis, infections caused by bacteria, viruses c.g. Acquired immunodeficiency virus (AIDS) and fund; ocular disorders e.g. desphagia, occupanting menoractionas and irritable bowel syndrome, reproductive system disorders e.g. testicular felbencel syndrome, reproductive system disorders e.g. testicular felbencel syndrome, reproductive system disorders e.g. testicular felbencel syndrome, reproductive system classorders e.g. novolving neovascularisation e.g. malignancies, respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. caute kidney failure and blood related disorders e.g. myocardial continue and blood related disorders e.g. myocardial content are polypeptides can also be used to aid wound healing and epithealial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The publy peptides can also be used as a food additive or preservative to increase or decrease storage capabilities and in chemotaxis. The content, increase or decrease storage capabilities and content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librarial content, librar increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional

the endocrine polypeptides of the invention Bndocrine polypeptides and the endocrine polypeptides of the invention are useful in the endocrine polypeptides of the invention are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. the invention are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by determining the presence or absence of a mutation in an endocrine polymucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, hyperproliferative disorders such as cardiac arrest, carebrovascular and isorders such as cardiac arrest, carebrovascular disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine disorders such as corneal infection, endocrine disorders such as asthema. The polypeptides can also be used to respiratory disorders such as asthema. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WiPO at AACCTCACACTGGCTGATCTCCTCTACTGCACGCTCCTTCAGCCCTTCTCTGTGGACACC 300 TATGITGCAGITAGCTGGGGGGGGGGGGGGCTGTGACAGGCACCGTGGGCAATGTGCTC 180 877 TACCTCCACCTGCACTGGCGCACCGGTGCCACCTTCTGCAGGGTATTTGGGCTCCTCCTT 936 361 TITECTICAATICIGICTICATCCTGACCCTCGGCCTCATCGCACTGGGACGCTACCTC 420 CTCATTGCCCACCCTAAGCTTTTCCCCAAGTGTTCAGTGCCAAGGGGATAGTGCTGGCA 480 637 ArgregaAcaccrercacccaAcrrerecrecraccarcaccargacrererecres 1 TIGAAIGCIAGGIICIGAIICCCICITICCICICCACCCICIGCCICITIAGCCICIAIC 60 ACCCTACTGGCCTTGGCCATCCAAGCTCCGTACCCGATTCAACCTGCTCATAGCC TACCTCCACCTGCACTGGCGCACCGGTGCCACCTTCTGCAGGGTATTTGGGCTCCTCTT Isolated polypeptide for treating, preventing and/ or prognosing disorders of the endocrine system such as reproductive disorders, endocrine cancers and also for testing and detection e.g. diagnosis. ,0 Query Match 99.6%; Score 1306; DB 5; Length 2046; Best Local Similarity 100.0%; Pred. Novel polypeptide useful for diagnosis, prognosis, prevention, and treatment of immune, hyperproliferative, renal, respiratory, cardiovascular, reproductive, endocrine, gastrointestinal and neurological disorders.

Disclosure, Page 296-297; 335pp; English

The invention relates to an isolated polypeptide comprising a sequence at least 90% identical to a full length protein sequence selected from 55 sequences given in the specification sequence of 163, 74 or 140 amino acids fully defined in the specification, or the encoding sequence contained in 49 cDNA clones given in specification e.g. HCFATOS, HWAAB95 or HTMPMO1. The protein and its encoding mucleic acid are useful for condition in a subject and for preventing, treating or ameliorating a medical condition. The protein, its encoding mucleic acid and an isolated antibody that can bind to the protein are useful in treating, preventing, diagnosing and/or prognosing immunodeficiencies, autoimmune disorders, allergia reactions and conditions, inflammatory conditions, preference, or allergia reactions and conditions, inflammatory conditions, preference, endoaries, hyperproliferative disorders, new neurological disorders, endocrine disorders, respiratory disorders, repercently espstem disorders, infectious diseases, and conditions, inflammatory and/or dispnose neuronal damage which occurs in certain characteristics such as body height, welght, pair color, and to increase or decrease storage capabilities, fat content, libid, protein, carbohydrate, vitamins, minerals, cofactors or other nutritional components. The mucleic acid of the invention can be used in gene therapy. This polynucleotide sequence represents one of the novel nucleic acid of the invention can be used in gene
